EDUCATION

Rensselaer Polytechnic Institute

Bachelor of Science: Computer Science | GPA: 3.6

Troy, NY

May 2025

WORK EXPERIENCE

Zero Sum Defense

Minneapolis, MN (Remote)

Member of Technical Staff

July 2025 - Present

- Built the AWS account provisioning pipeline behind customer signup for the Actualize identity platform, replacing a 25-minute manual setup per account with a zero-touch flow that has provisioned **nearly 20,000 accounts** at 50+ a day
- Designed a self-healing drift checker, a weekly EventBridge job that reconciles each tenant against its expected state; it caught **200+ misconfigured tenants** on its first run while preserving single-tenancy's blast-radius isolation
- Built the browser-automation flow behind the desktop client's **in-app payment feature**, driving a multi-step checkout and its additional verification steps end to end
- Owned native binary packaging for hardware-token authentication in the Rust and Tauri desktop client, writing the per-target build scripts GitLab CI runs for Windows, macOS, and Linux so a bad binary **surfaces in CI, not on user machines**
- Built the autoscaling fleet of ephemeral **Windows EC2 GitLab runners** (Terraform) that the client's Windows builds run on
- Deployed Actualize across AWS, GCP, Azure, and Cloudflare with shared **Terraform** modules

IBM

Troy, NY

Software Engineering Intern

Jan 2024 - Aug 2024

- Built an open-source REST API for the AWS Identity Store (github.com/Vicguin65/IBM-Identity-Center-API) serving **100+ IBM teams** daily, integrated with IBM Security Verify for single sign-on across identity providers
- Closed a gap in AWS's SCIM API by merging its responses with the AWS Identity Store SDK, returning **complete user records from one endpoint**

AI Camp

Palo Alto, CA

Software Engineer Intern

May 2022 - Dec 2023

- Led a team of **6 interns** shipping an educational bot with NVIDIA NeMo guardrails and GPT-3.5-turbo, deployed in 8 courses reaching 60+ students each
- Built a Django REST API on PostgreSQL that grouped **300+ students** into cohorts by similarity of self-rated skill vectors
- Trained a scikit-learn resume classifier on 1,700+ records that held **88% accuracy** over six months in production
- Automated hiring workflows via the Lever API across two hiring cycles, saving **100+ hours per season**

PROJECTS

Who is Tyler Du, Portfolio Site with AI Agent

github.com/Vicguin65/Portfolio-Website

Personal project

Sept 2024 - Present

- Built the full stack solo: React frontend, FastAPI on AWS Lambda, Terraform-managed infrastructure, and a **Claude agent** that evaluates fit against a pasted job description, grounding on a resume and knowledge base fetched from S3 at request time so content updates ship without a redeploy

SKILLS & AWARDS

Languages: Python, Rust, TypeScript, JavaScript, HCL

Cloud & Infrastructure: AWS (Lambda, DynamoDB, EC2, S3, IAM), GCP, Azure, Cloudflare, Terraform, Docker, GitLab CI/CD

Frameworks & Tools: React, FastAPI, Django, PostgreSQL, Tauri, Git, Claude Code, Claude API, scikit-learn

Certifications & Awards: AWS Certified Cloud Practitioner, HashiCorp Terraform Associate, GIAC GFACT, Dean's Honor List
